Park Power Simplifies RV electrical connections

New Go Anywhere™ Kits ensure the right adapter for any situation

Menomonee Falls, WI:

Park Power has long been known as the go-to resource for RV electrical power cords and adapters. Their industry knowledge and resources has led to the development of the new Go Anywhere™ kits. These kits include the adapters necessary to connect a 30A or 50A detachable power inlet to 15A, 30A, and 50A receptacles. One kit is all you need to Go Anywhere!

Go Anywhere™ Kits

RVers know that it is critical to have the right adapters to connect power when staying at an RV park. Many times, there are power compatibility issues between the power supply and the RV. Go Anywhere™ kits provide the adapters necessary to address these compatibility issues. “At Park Power we understand the details that make RV-ing safer and less complicated” said Reese Bischoff – National Sales Manager, RV. “The Go Anywhere Kits are an ideal tool to provide options for power connections to make sure there is always an electrical supply to the RV.” The new Go Anywhere™ kits from Park Power will be available in January of 2017.
